Engage

How Engage works

Wireframes of the host and participant experience in the Google Meet™ side panel, plus the website. Each screen is the working product, shown in greyscale, with numbered notes.

What Engage is

A side-panel add-on for Google Meet. The host runs quick polls, pulse checks, recall checks and word clouds, takes questions and reactions, and sees live who has gone quiet. Participants answer from their own panel without leaving the call. After the meeting the host gets a coach summary.

How to read this

Numbers on a screen match the notes beside it. Every page ends with one question for you. Answer as many as you like, in any form: comments on the PDF, a message or a call.

Live site: engage.neuronlab.in · Try it yourself without a Meet call: engage.neuronlab.in/try

Contents

1. The flow in one page
2. Host: start, tools, prompts, people, summary
3. Participant: join, answer, games, recap
4. Website: home page, live demo, sign-in
5. Questions for you

The flow in one page

1. Host
Opens Engage from Activities in Meet and presses Start Engage.

→

2. Host
Shares the meeting code or link, or invites the call through Meet.

→

3. Participants
Open Engage in their side panel and join with their real name.

→

4. Host
Picks a tool from the Host tools menu and launches a poll, pulse check, recall check or word cloud.

→

5. Participants
The prompt fills their panel with a countdown. They answer, or the timer runs out. Then: back to the meeting.

→

6. Host
Sees results, new questions and reactions, and who has been quiet, all in the panel.

→

7. Host
Ends the meeting. Gets the summary in the panel and by email, and the CSV on the website.

Principles

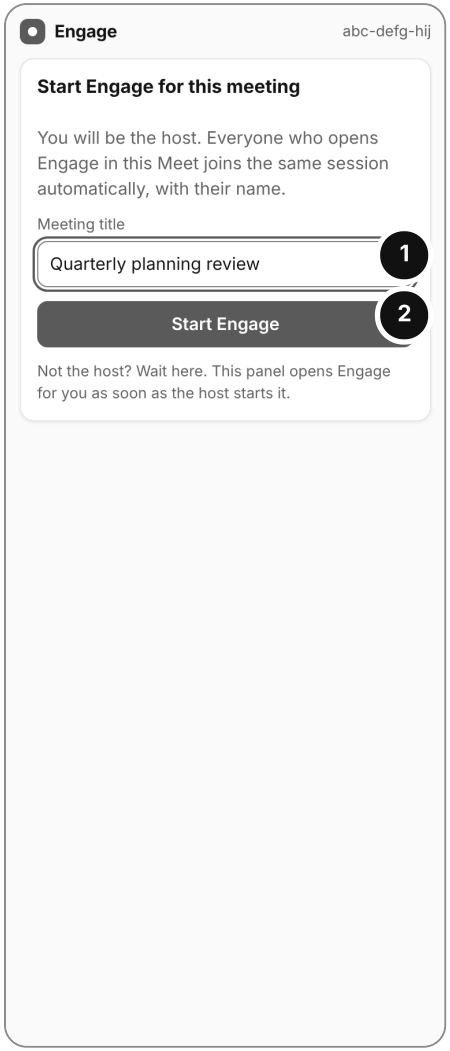

- Calm: no sound and no pop-ups over the meeting.
- Transparent: participants are told what the host can see.
- Only actions inside Engage are counted. No audio, video or screen is recorded.

Behind the scenes

- Meetings left open with nobody connected end by themselves after an hour.
- The host is reminded after an hour that the meeting is still running.
- Demo meetings at /try are thrown away after 30 minutes.

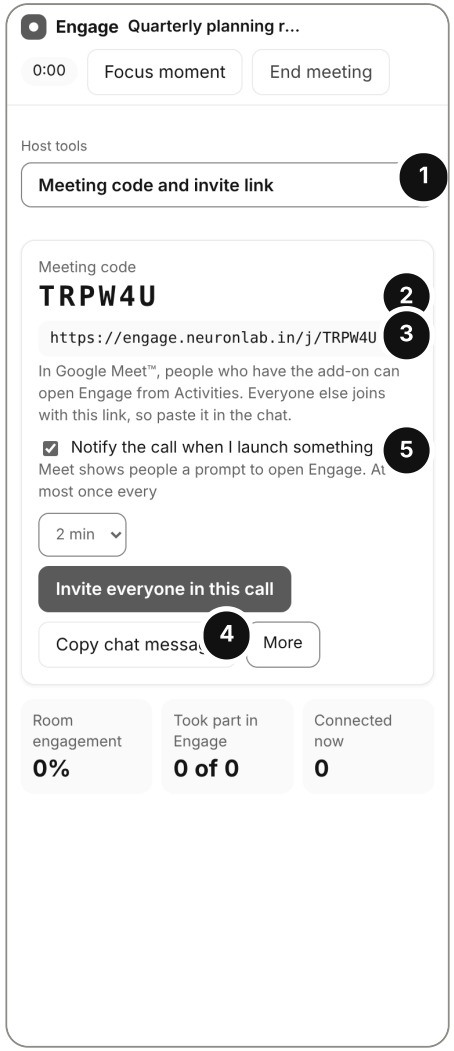

Your feedback: Does this flow match how you run your sessions? Which step would you skip or change?

Start Engage and invite people

Start (in the Meet side panel)

1. Meeting title. Defaults to the Meet code if left empty.
2. Start Engage. You become the host. Anyone else who opens Engage in this call joins the same session.

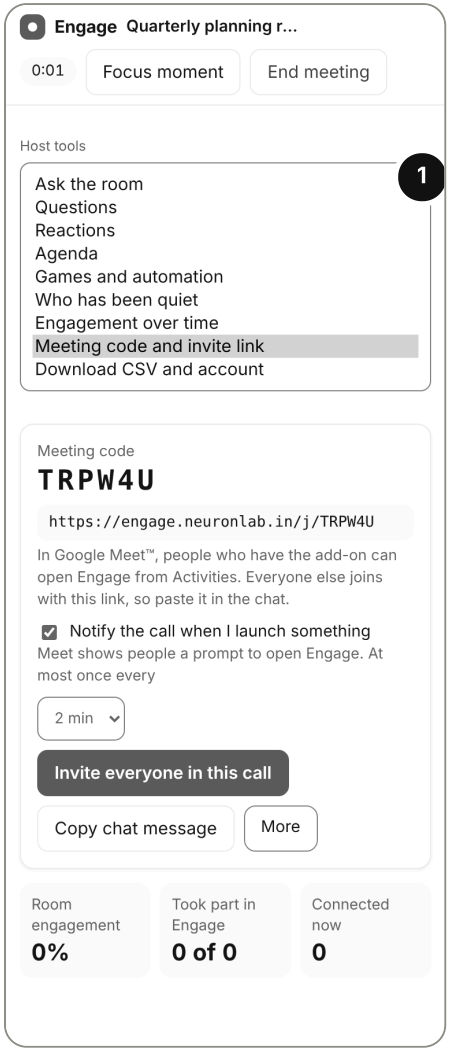

Meeting code and invite link

1. Host tools menu. Every host feature lives here, one at a time, so the narrow panel stays readable.
2. Meeting code. People can type it on the website to join.
3. Join link for the meeting chat.
4. Invite everyone in this call (asks Meet to show its own prompt) and Copy chat message.
5. Notify the call when you launch something, at most once every 1, 2 or 5 minutes.

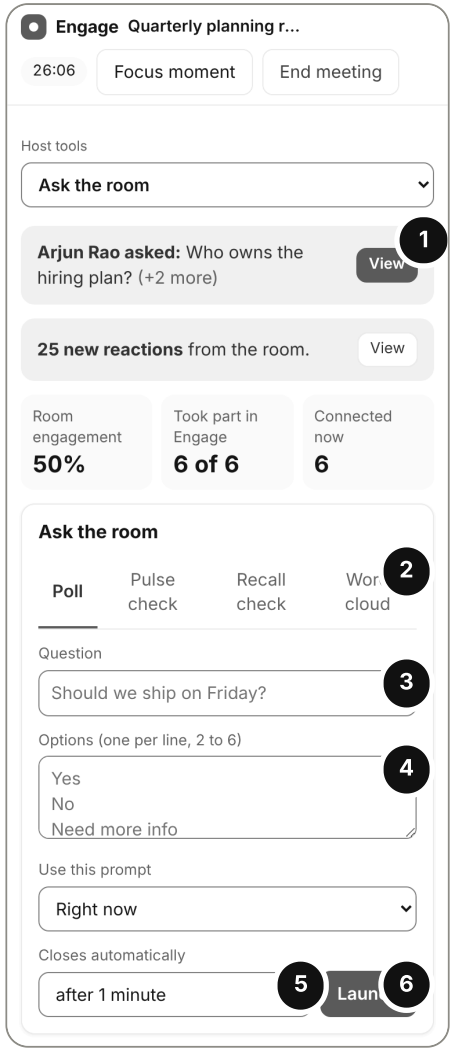

Your feedback: Is it clear how participants get in? Would you rather share a link, a code, or rely on the Meet prompt?

Host tools and asking the room

The Host tools menu

1. Nine tools: Ask the room, Questions, Reactions, Agenda, Games and automation, Who has been quiet, Engagement over time, Meeting code and invite link, and Download CSV.

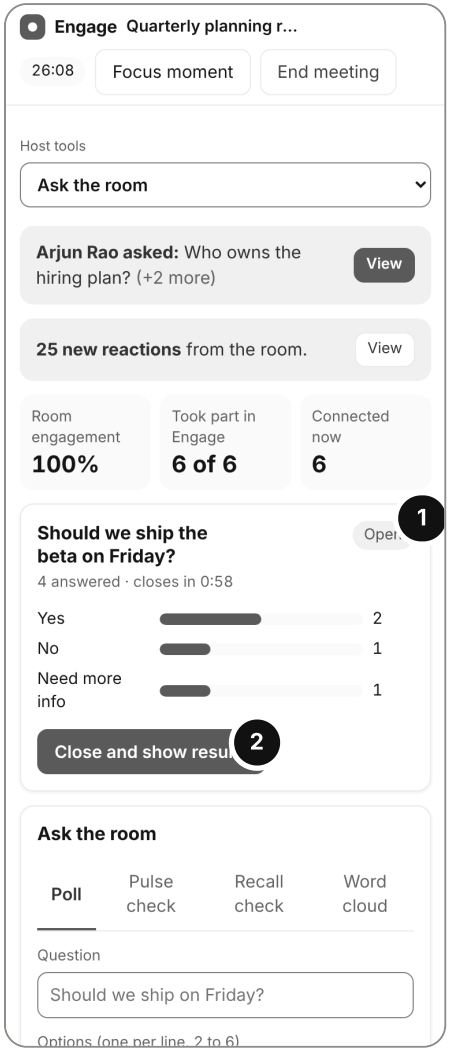

Ask the room

1. Cues for things happening in other tools: a new question with who asked it, and new reactions. View jumps there.
2. Four prompt types: Poll, Pulse check (1 to 5), Recall check (did the point land?), Word cloud.
3. The question.
4. Options, one per line (poll and recall check).
5. Closes automatically after 20 seconds to 2 minutes, or when you close it.
6. Launch. It appears on every participant's panel at once.

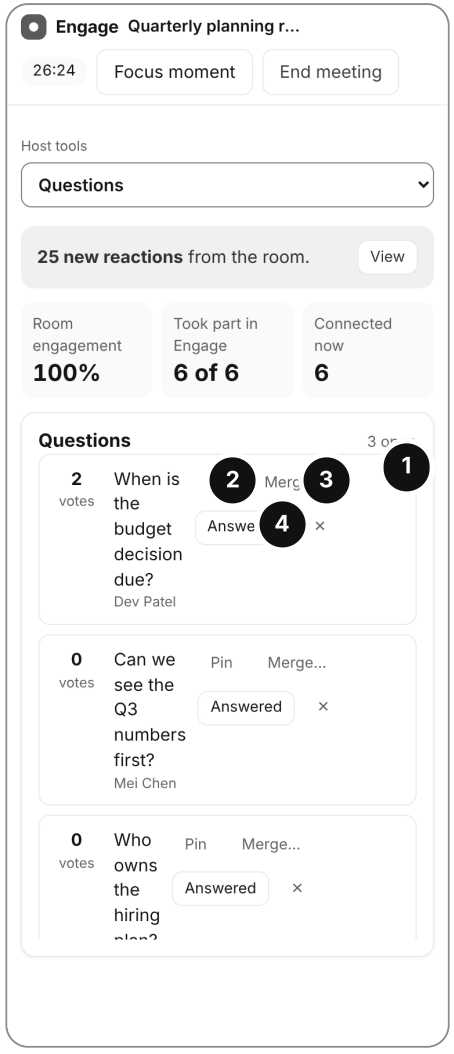

Your feedback: Which prompt type would you use most? Is anything missing, for example a quiz with scoring or an open text answer?

Live results and questions

Results while the prompt is open

1. Live counts as people answer, with the time left. Individual answers are never shown next to names.
2. Close and show results ends the prompt early and shares the group result with everyone.

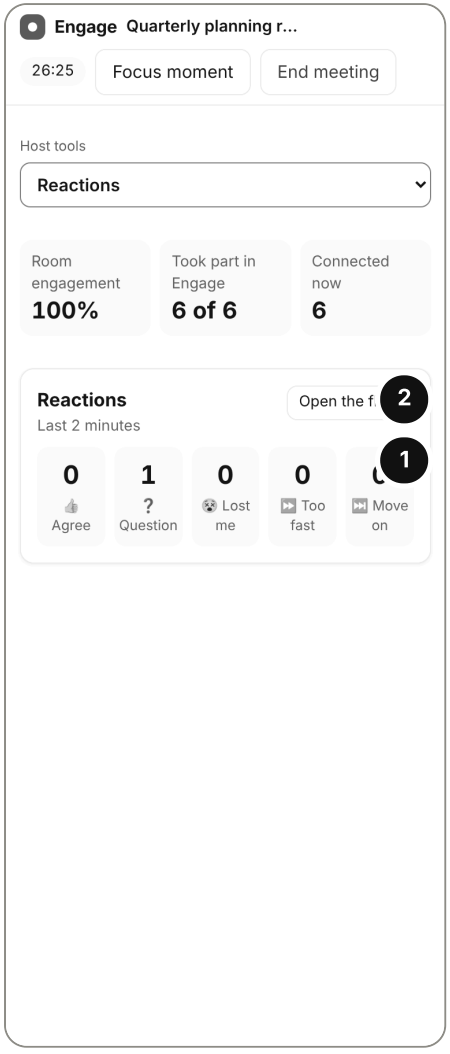

Questions from the room

1. Each question with its votes and who asked it. Participants upvote each other's questions.
2. Pin a question so everyone sees it at the top.
3. Merge duplicates into one.
4. Mark as answered.

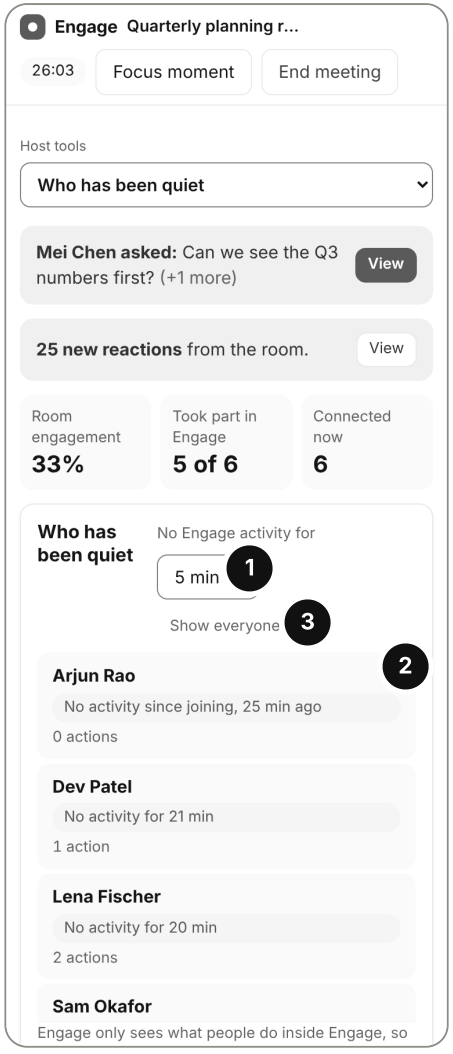

Your feedback: How do you handle questions today? Would you want to answer them in Engage, or only collect them?

Reactions and who has been quiet

Reactions

1. Counts from the last 2 minutes: Agree, Question, Lost me, Too fast, Move on.
2. Open the floor invites everyone to share a view on the next topic.

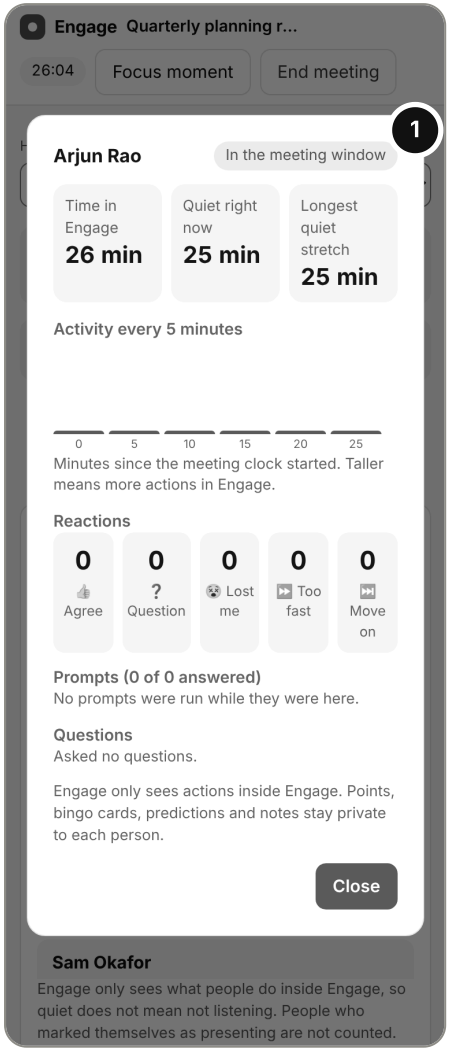

Who has been quiet

1. Choose what counts as quiet: no Engage activity for 3, 5, 10 or 15 minutes.
2. Names of connected people who have been quiet, longest first. People who marked themselves as presenting are not counted.
3. Show everyone lists all participants, not only quiet ones. Select a name for details.

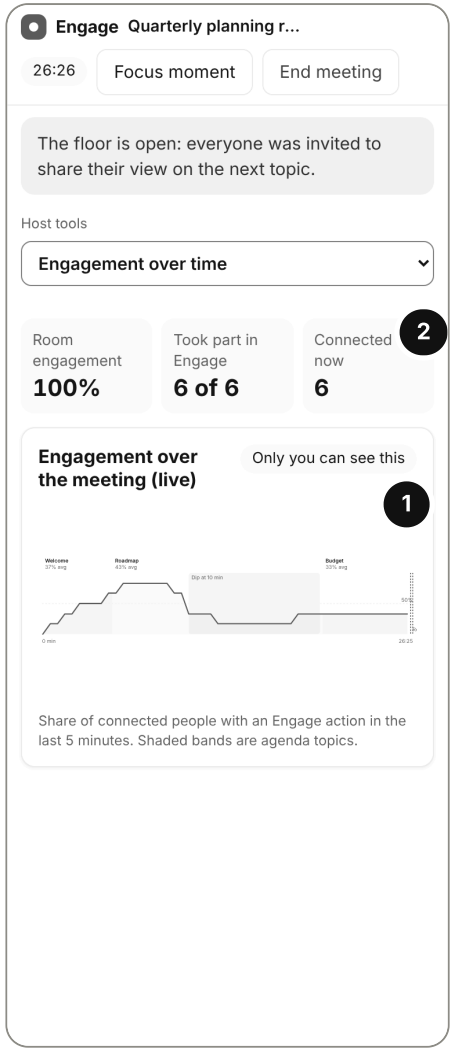

Your feedback: Is the quiet list useful or uncomfortable? Would you act on it during the meeting, or only afterwards?

Per-person detail and engagement over time

One person's detail

1. Time in Engage, how long they have been quiet, their longest quiet stretch, activity every 5 minutes, reactions, which prompts they answered (not what they answered) and their questions.

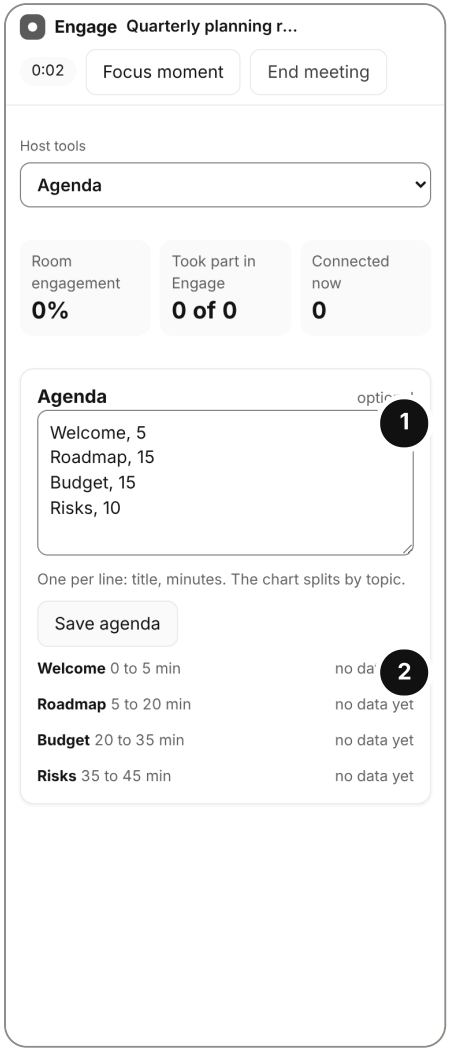

Engagement over time

1. Share of connected people who did something in Engage in the last 5 minutes, across the meeting. Shaded bands are agenda topics. Only the host sees this.
2. Room engagement now, how many took part, and how many are connected.

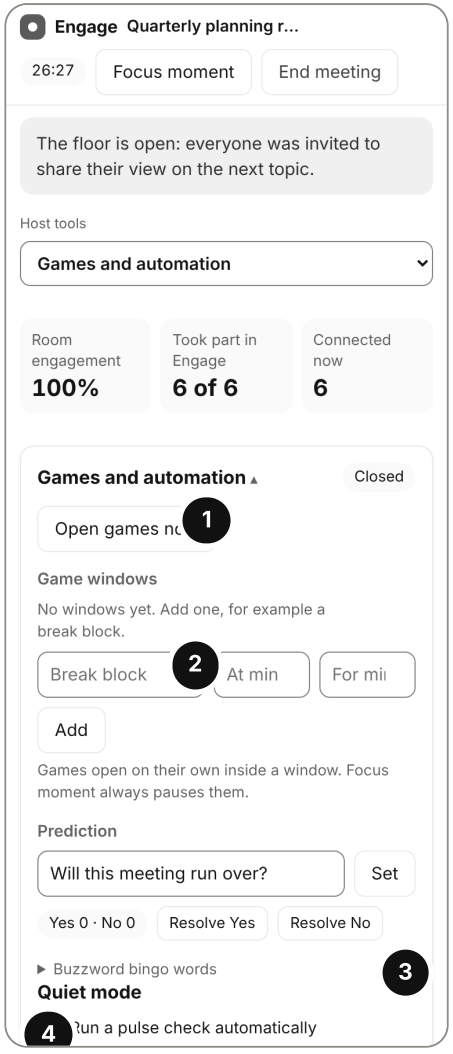

Your feedback: What would you change about how engagement is measured? Is "any action in the last 5 minutes" a fair signal?

Agenda, games and automation

Agenda

1. One topic per line with minutes. The chart splits by topic, and you can prepare a prompt for each topic. Engage reminds you near the end of the topic.
2. The saved agenda with each topic's time slot and engagement.

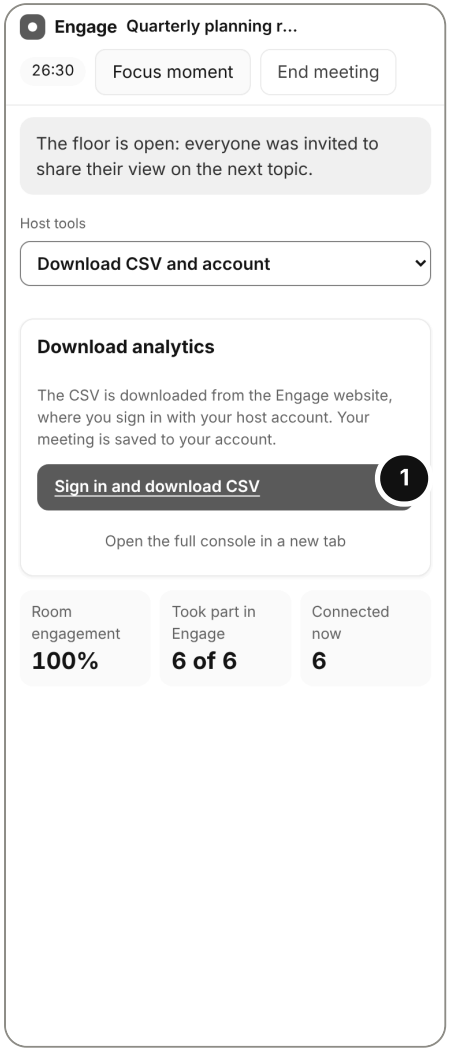

Games and automation

1. Open or close games now (buzzword bingo and a yes or no prediction). A Focus moment always pauses them.
2. Game windows: open games on their own at set minutes, for example during a break.
3. Buzzword bingo words: open this to set your own.
4. Quiet mode: run a pulse check automatically every 10 to 45 minutes.

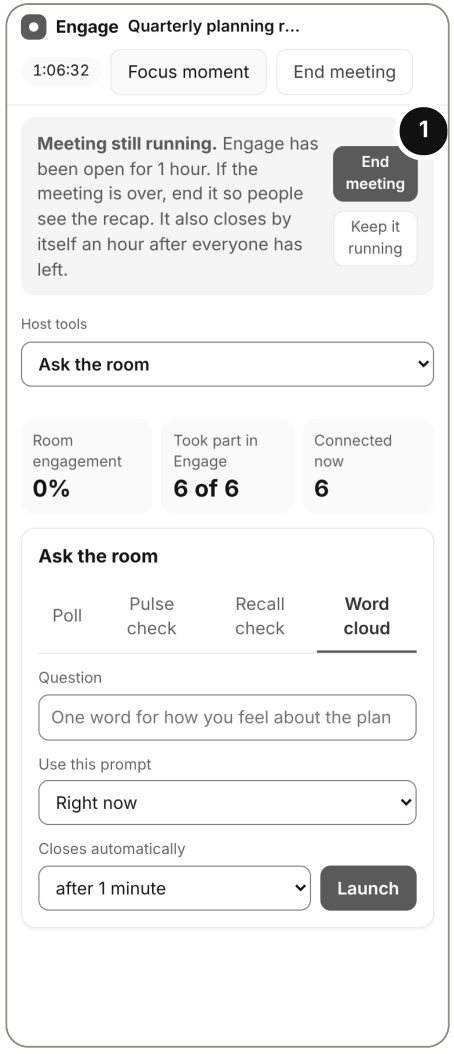

Your feedback: Do games belong in your meetings at all? Which automation would save you effort?

Analytics download and long meetings

Download CSV and account

1. The only step that leaves Meet: sign in on the website, where the CSV downloads and the meeting is saved to your account.

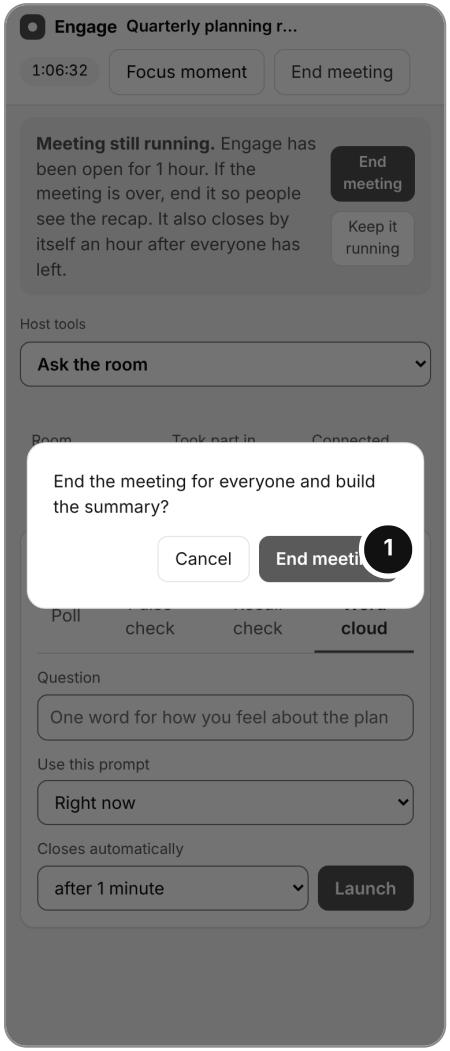

Still running reminder

1. After an hour the host is asked whether the meeting is over: End meeting, or Keep it running for another hour. Meetings with nobody connected end by themselves after an hour.

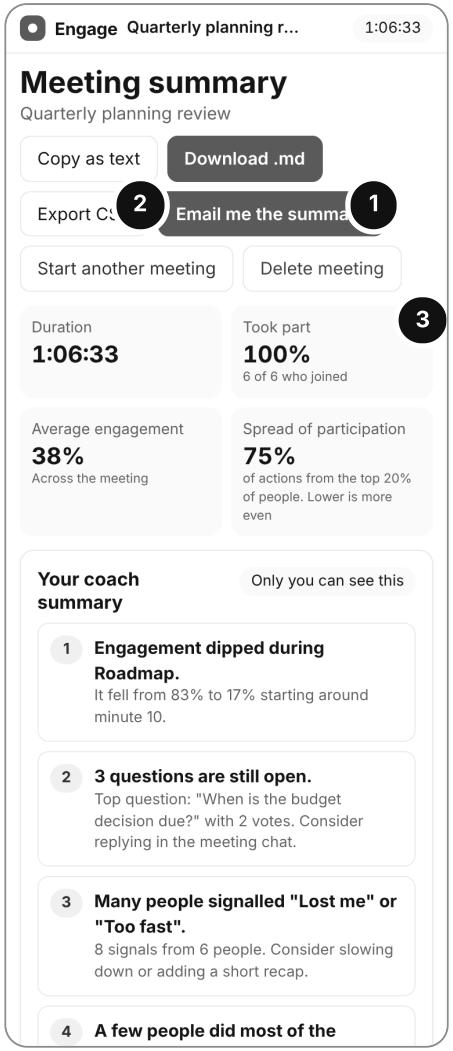

Your feedback: Would you download the CSV? What would you do with it, and what columns would you need?

Ending and the summary

Ending the meeting

1. Confirmed in the panel, because Meet blocks the browser's own pop-ups.

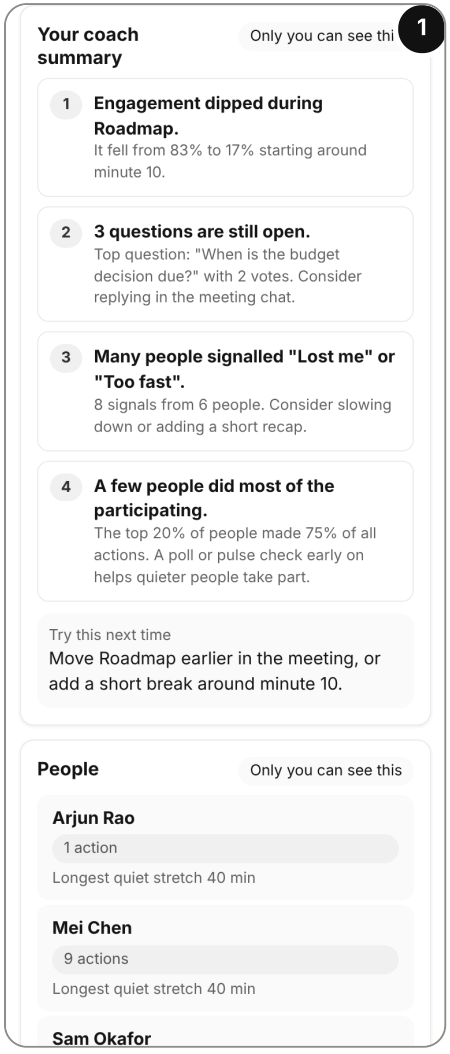

Meeting summary

1. Email me the summary: sent to your account email once it is confirmed. Signed-in hosts get it automatically when the meeting ends.
2. Export CSV, Copy as text, Download as a document.
3. Duration, how many took part, average engagement, and how even participation was.

Your feedback: Is the summary in the right place? Would you prefer it by email, in the panel, or both?

The coach summary

Coach summary (host only)

1. Specific observations, for example when engagement dipped, open questions, many "Lost me" signals, or a few people doing most of the talking. Then one suggestion for next time. Below it: people, the engagement chart, every prompt's results, top questions and reactions.

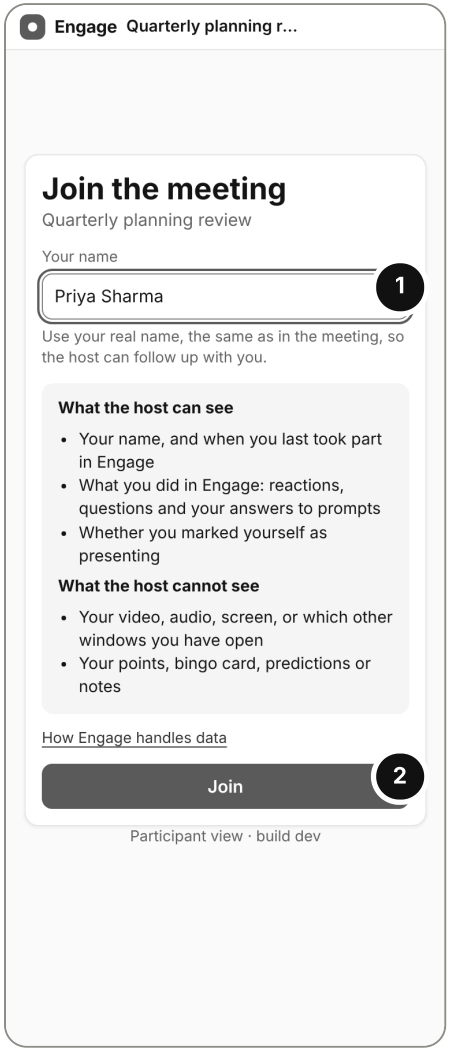

What the summary email contains

- Duration, who took part and the average engagement
- Names with no activity in Engage, and the most active people
- The coach observations and the tip for next time
- Top questions
- A link back to the full summary

It goes only to the host's own confirmed account email, once per meeting, or on request at most every 10 minutes.

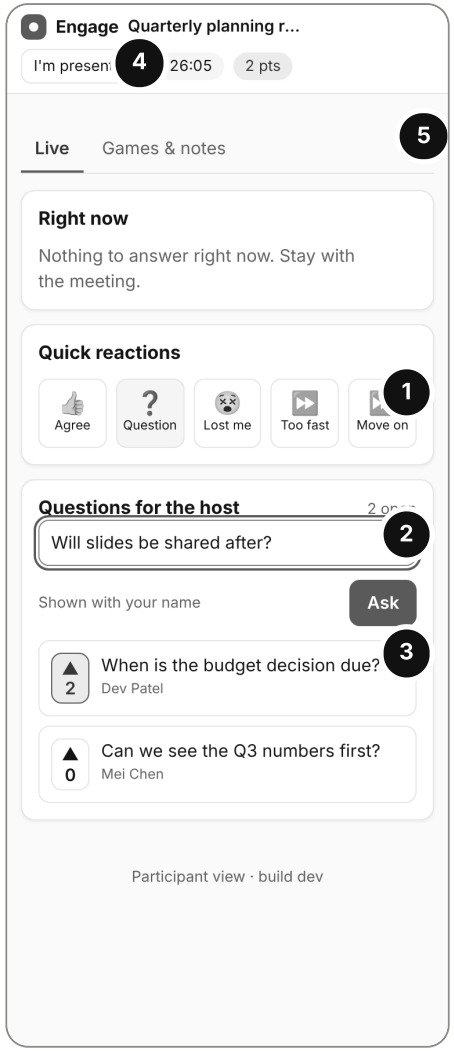

Your feedback: Are the coach observations useful? What would you want it to tell you after every session?

Joining and the everyday panel

Join with your name

1. Real name, as it appears in the meeting. "Anonymous", "Guest" and similar are refused.
2. Join. Above it, a plain list of what the host can and cannot see.

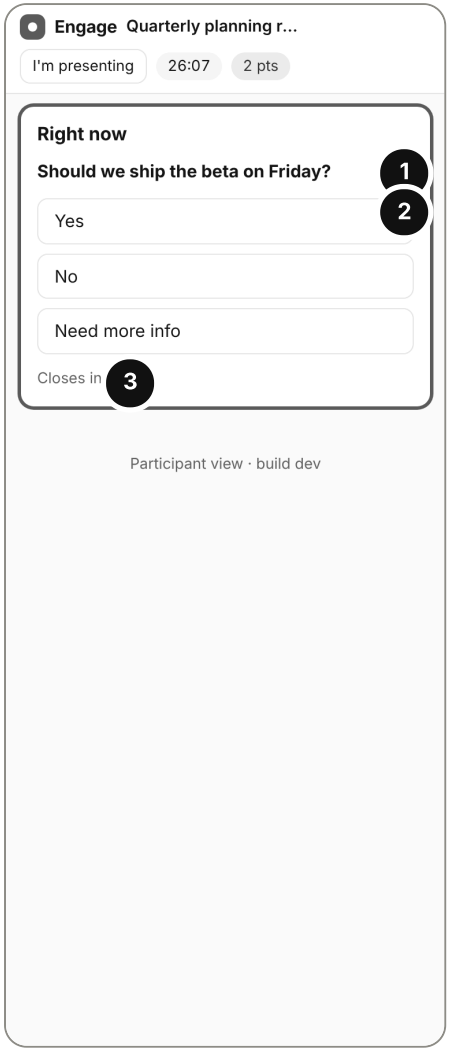

The panel between prompts

1. Quick reactions: Agree, Question, Lost me, Too fast, Move on.
2. Ask the host a question, shown with your name.
3. Everyone's questions, which you can upvote.
4. I'm presenting: nothing pops up and you are not counted as quiet while you share your screen.
5. Live, or Games and notes.

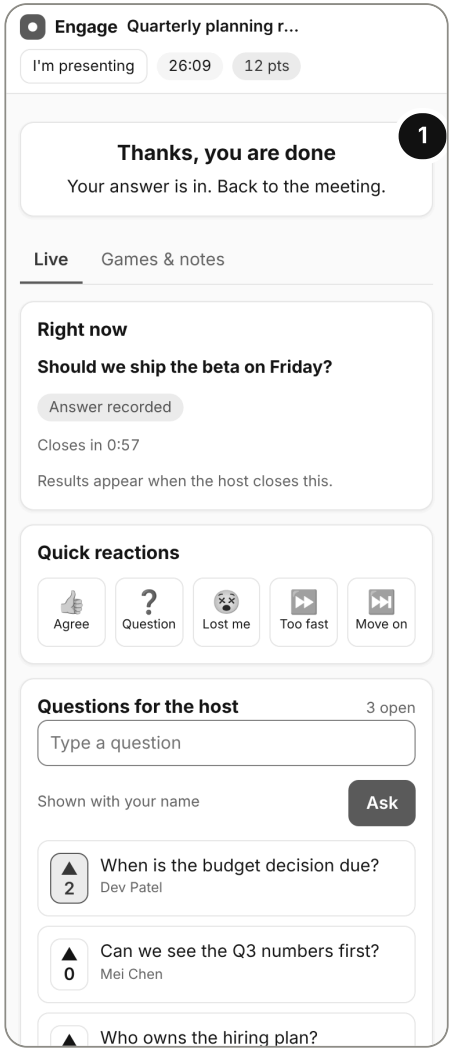

Your feedback: Would participants be comfortable using their real name? What would make them trust it?

When the host asks something

The prompt takes over the panel

1. Only the question is shown, so it cannot be missed.
2. Tap an answer.
3. Countdown until it closes.

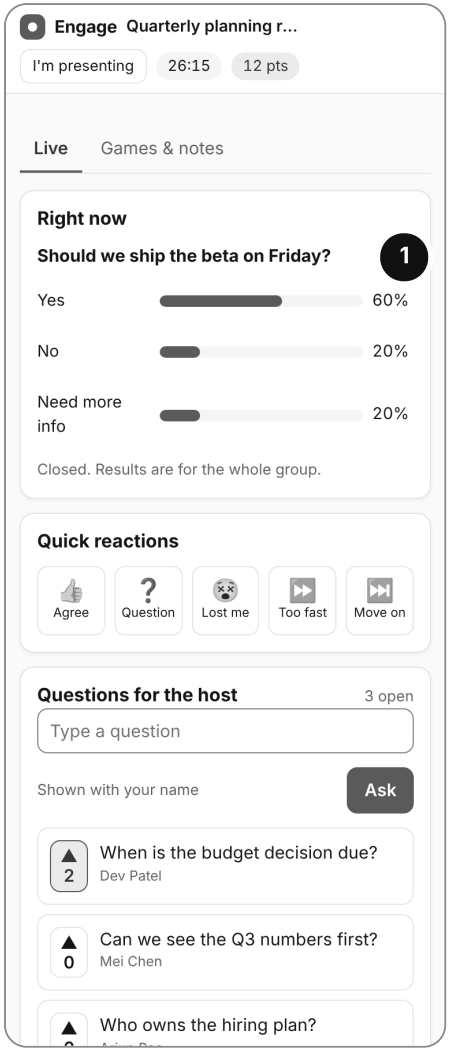

Done, back to the meeting

1. After answering: "Thanks, you are done. Back to the meeting." If the timer runs out first: "Time's up." The note fades after a few seconds and the normal panel returns.

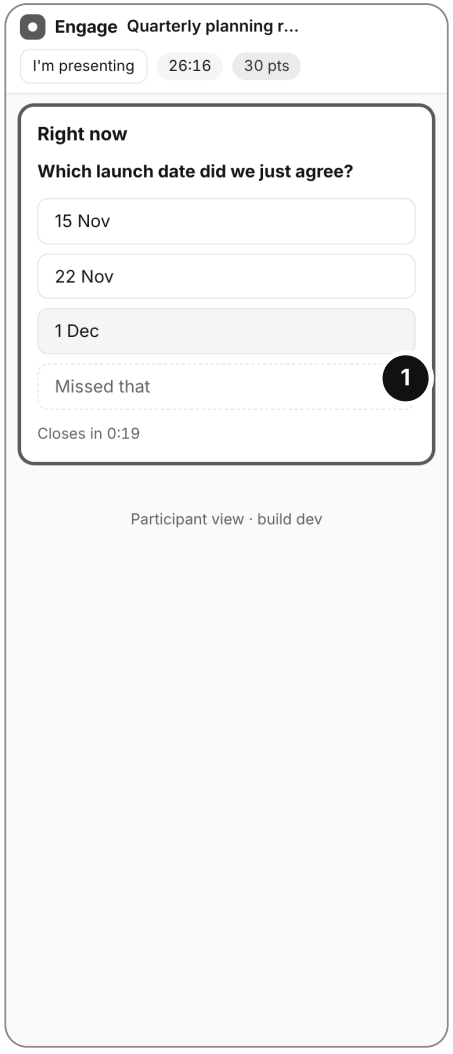

Your feedback: Does the takeover feel right, or too intrusive? Should it also make a sound?

Results and other prompt types

Group results

1. When the host closes a prompt, everyone sees the group result. Nobody's individual answer is shown.

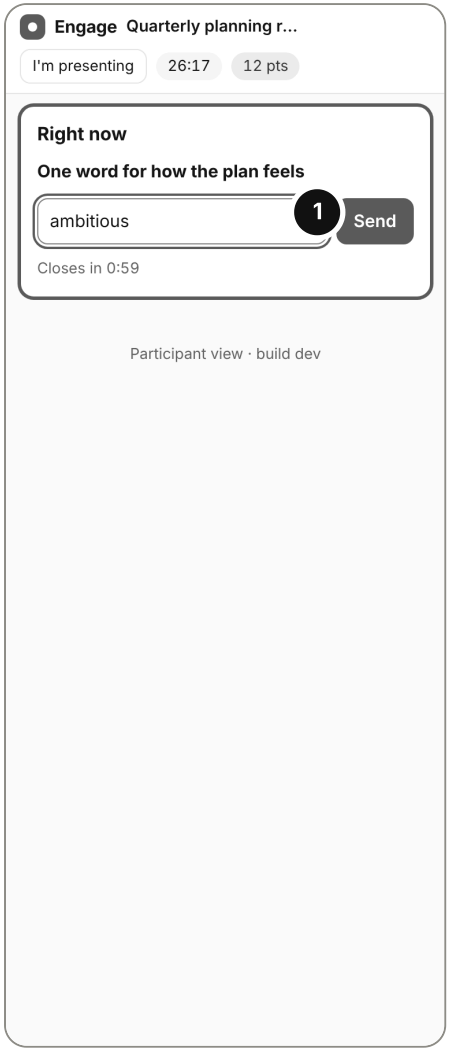

Recall check

1. "Missed that" is always offered, and counted separately from wrong answers, so people can be honest.

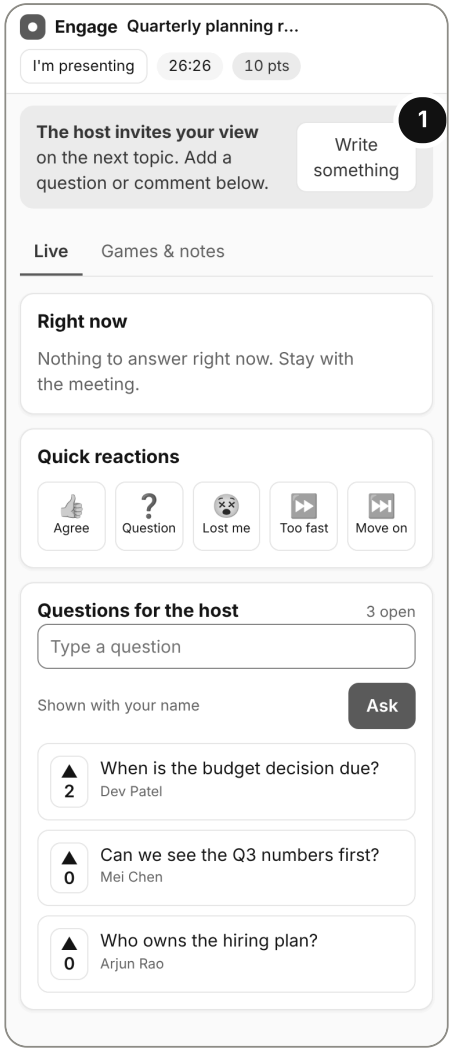

Your feedback: Would people answer a recall check honestly? Is "Missed that" the right wording?

Word cloud and the floor

Word cloud

1. Up to three words each. The host sees the most common words grow.

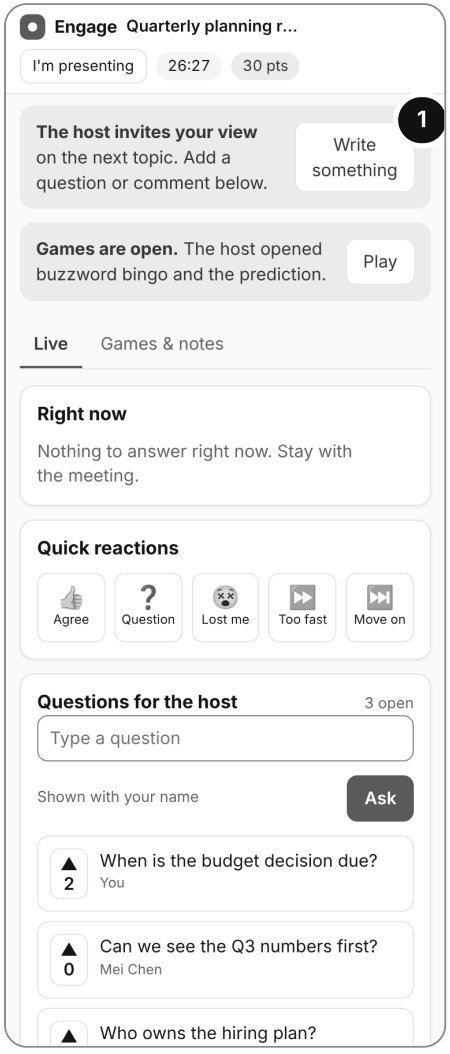

The host opens the floor

1. A banner invites a view on the next topic, with a shortcut to write a question or comment.

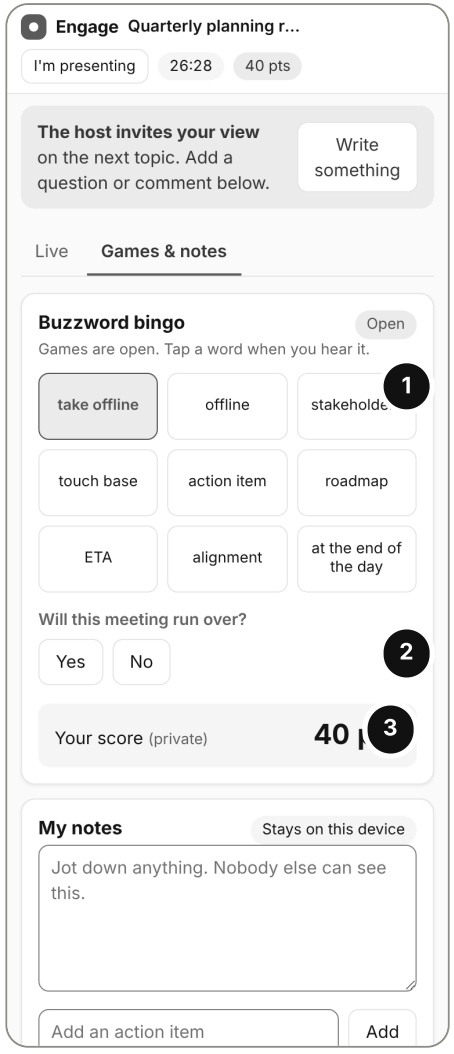

Your feedback: Which of these would actually get quiet people to speak up?

Games and notes

Games are open

1. A banner with a Play button when the host opens games.

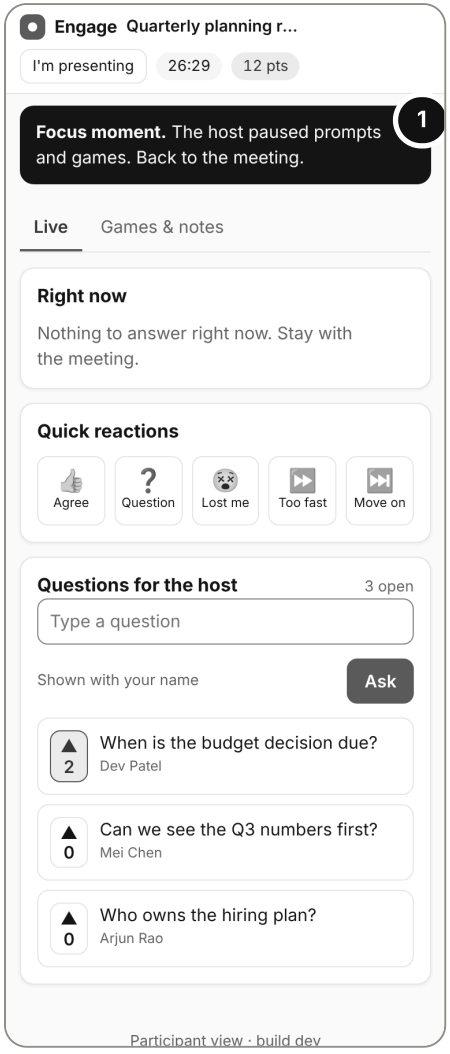

Games and private notes

1. Buzzword bingo: tap a word when you hear it.
2. A yes or no prediction about the meeting.
3. Your private score. Nobody else sees it. Below: private notes and action items that stay on your device.

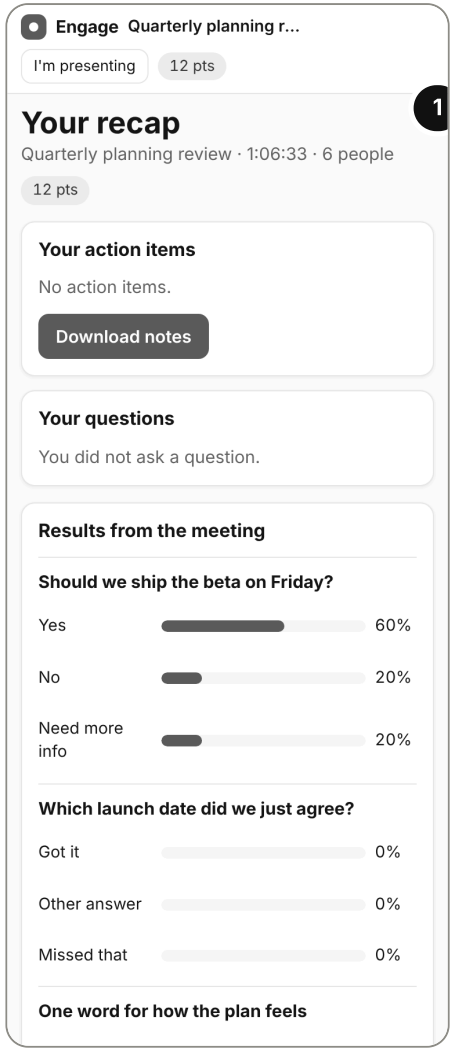

Your feedback: Fun or a distraction? Would your participants play?

Focus and the recap

Focus moment

1. When the host turns on Focus, prompts and games pause for everyone.

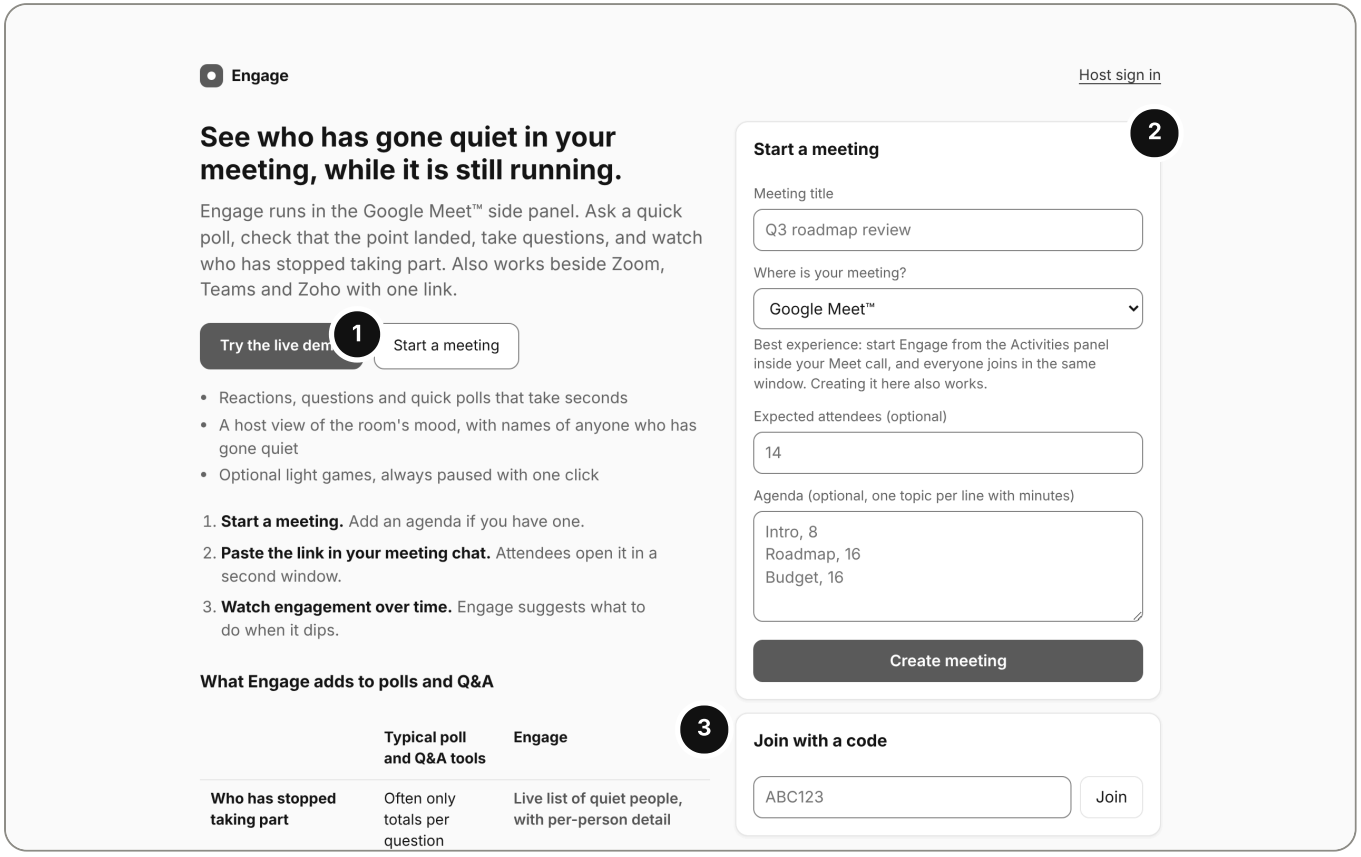

Your recap when the meeting ends

1. Your action items and notes to download, your questions, and the group results of every prompt.

Your feedback: What should a participant take away at the end?

Home page

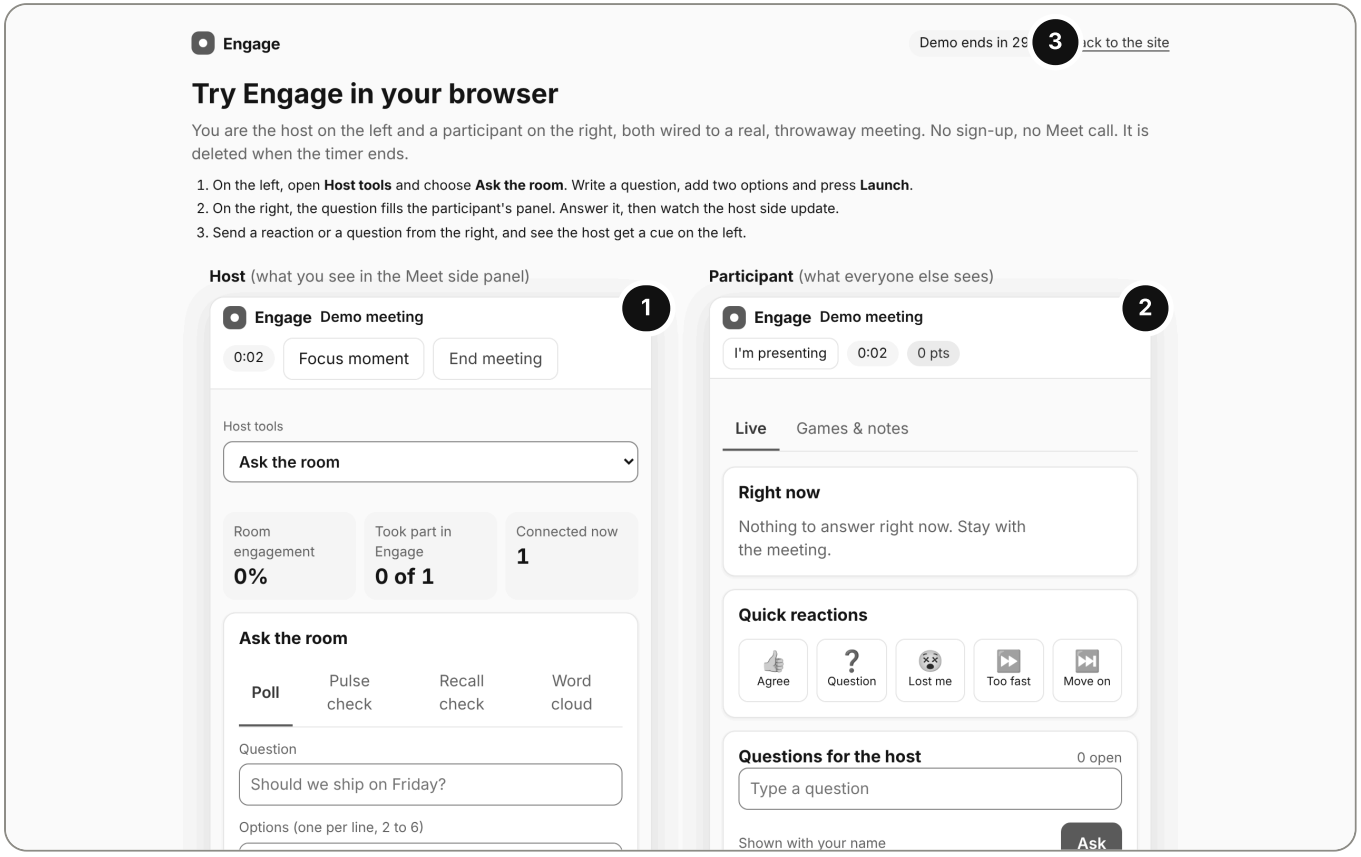

engage.neuronlab.in

1. Try the live demo, or start a meeting for Zoom, Teams, Zoho or any other tool (they join with a link in a second window).
2. Start a meeting from the website: title, platform, expected attendees, agenda.
3. What Engage adds to typical poll and Q&A tools.

Your feedback: Does the home page make you want to try it? What is unclear in the first 10 seconds?

Live demo without a Meet call

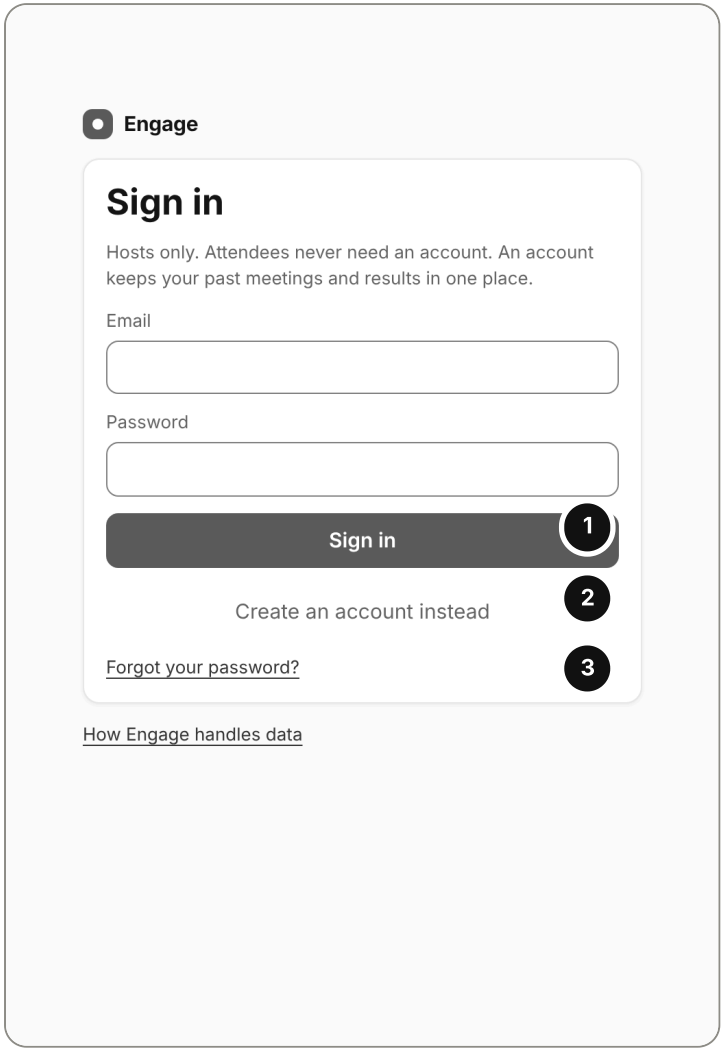

engage.neuronlab.in/try

1. You are the host on the left: the same panel as in Meet.
2. A participant on the right, already joined.
3. A throwaway meeting that is deleted after 30 minutes. No sign-up.

Your feedback: Try it now at engage.neuronlab.in/try. What confused you?

Host account

Sign in

1. Sign in. Hosts only; participants never need an account.
2. Create an account. A confirmation email follows.
3. Forgot your password: a reset link that works once and expires in 30 minutes.

What an account gives a host

- Past meetings and their summaries in one place (kept 30 days)
- CSV downloads
- The summary emailed after every meeting

Your feedback: Would you create an account? What would make it worth it?

Questions for you

The big ones

1. Would you install Engage instead of using Meet's own polls and Q&A? Why, or why not?
2. Which single feature would you use every week?
3. What would stop you from using it in your next session?
4. What would you pay for it, if anything, per host per month?

Details

5. Anything on these pages that was confusing or that you would remove?
6. Anything missing, for example quizzes with scoring, breakout rooms, or Zoom and Teams inside their own apps?
7. Is seeing who has gone quiet fair to participants? How should it be explained to them?
8. Would you run it in one of your sessions for a trial? Reply with a date and we will set it up.
